(54) Title: AIRFRAME TENT AND PUMP

(57) Abstract: An airframe supported tent (10) includes at least one pair of coupled airbeams (12). The coupled airbeam frames (12) include first (36a) and second (36b) redundant airbeam bladders for providing support to the tent (10) when inflated. The airframe supported tent (10) also includes a valve interface (14), fluidly coupled to each of the first and second redundant airbeam bladders (36a, 36b), for allowing all of the airbeams to be inflated and deflated through the valve interface (14). An air pump (50) is provided which is small, compact, and lies generally flat when compressed. The air pump (50) couples with the valve interface (14) on the tent (10), to inflate and deflate all of the airbeams generally simultaneously.
